PROJECTS

Kivi Health

Its B2B based product helps doctors and its staff to maintain data (basic contact details, reports and medical history) of their patients. Also have integration with Jio and Netmeds.

Marketcube.io

It's an in house e-commerce platform project to manage marketplace vendors and marketplace operators in one place, the tech stack I worked on is MERN with graphql.

PMS

It's an in house project used to manage and maintain the data of the employees, the tech stack I worked on is MERN with graphql.

Cien.ai

In this project, I worked as a full-stack developer using the meteor framework. My responsibility is to develop and maintain frontend and backend functionalities.

Order management (internship)

This project is developed using java (JavaFX) programming language to demonstrate the use of programming paradigms.

ACTIVITIES/HOBBIES

- Attending tech talks. Sharing coding content on Instagram and Medium.
- Follow and upgrade skills from open source contributors.
- Spending time with family and friends.
